1. Project Overview

1.1 Background

Gamers.SG is a national digital membership platform for gamers in Singapore, developed under the stewardship of SCOGA (Singapore Cybersports and Online Gaming Association). The platform is intended to become the definitive identity and services hub for Singapore's gaming community, covering competitive and casual gamers alike.

Existing platforms such as onePA and uPlay demonstrate strong event and programme listing capabilities but lack a gamer-centric identity layer. Gamers.SG fills this gap by combining verified identity, a professional gaming profile, community tools, a jobs board, and a members-only commerce ecosystem into a single integrated platform.

1.2 Strategic Vision

Gamers.SG is best understood as the LinkedIn for gamers in Singapore. Just as LinkedIn is the de facto platform for professional identity in the working world, Gamers.SG aims to be the platform of record for a gamer's journey, competitive history, and community connections.

The platform serves three core strategic goals:

- Monetisation: Generate sustainable recurring revenue through an annual membership subscription.
- Data authenticity: Leverage SingPass integration to ensure that every account corresponds to a verified, real person in Singapore.
- Ecosystem value: Create compounding value for gamers, organisers, and commercial partners through interconnected features.

1.3 Document Scope

This document specifies the Version 1.0 (V1.0) release of the Gamers.SG platform. V1.0 is a full commercial release, not a prototype. It covers all modules, user roles, data models, integration requirements, and non-functional requirements necessary for a production-ready system.

Version	1.0 - Commercial Release

Owner	SCOGA / Esports Academy Pte Ltd

Audience	Development team, technical architects, product stakeholders

Status	Ready for development scoping and estimation

2. Target Users and Platform Roles

The platform serves three distinct user roles, each with different permissions and journeys.

Role	Description	Monetisation Relationship
Gamer (Member)	A verified Singapore resident who registers on the platform. This is the primary user. They hold a profile, collect achievements, join teams, apply for jobs, participate in events and tournaments, and shop at the member store.	Annual subscription. Core revenue unit.
Organiser	An entity (company, association, school, individual) that lists tournaments and events on the platform. They manage listings, track registrations, and award achievements to participants.	May have a listing fee or revenue-share arrangement with SCOGA.
Platform Admin	SCOGA staff with full backend access. Responsible for platform moderation, achievement management, store management, and user verification oversight.	Internal role. No public-facing access.

3. Authentication and Identity

3.1 SingPass as Primary Authentication

SingPass (via the Myinfo API) is the sole authentication method for all Gamer accounts. This is a deliberate design decision rooted in the platform's core value proposition: authentic, verified data.

Key rationale:

- Every Singapore resident and PR holds a SingPass account. This removes barriers to onboarding while guaranteeing one real person equals one account.

SingPass Myinfo provides pre-verified data fields (name, NRIC, date of birth, nationality) which the platform can ingest automatically, removing the need for manual verification.

- Eliminates smurfing, duplicate accounts, and fake profiles that undermine the credibility of the achievement and competitive record system.

3.2 SingPass Integration Requirements

- Integration via the official Singpass API Developer Portal (https://api.singpass.gov.sg).
- Platform must be registered and approved as a Relying Party (RP) under the NDI (National Digital Identity) framework.
- OAuth 2.0 / OpenID Connect flow must be implemented in full compliance with PDPA and NDI guidelines.
- Only the minimum necessary data fields should be requested from Myinfo. Recommended fields: name, NRIC (hashed/masked for storage), date of birth, nationality, residential status.
- The NRIC value must never be stored in plain text. A one-way hash should be used to enforce the one-account-per-person rule.

3.3 Organiser Authentication

Organiser accounts are created and managed separately from Gamer accounts. They are not SingPass-gated. Organisers register via a standard email and password flow. SCOGA admin staff will manually verify and approve organiser accounts before they are granted listing privileges.

3.4 Session and Security

- JWT-based session management with configurable expiry.
- All sessions transmitted over HTTPS only.
- Role-based access control (RBAC) enforced at both API and front-end routing level.
- Refresh token rotation for long-lived sessions.

4. Gamer Profile Module

4.1 Overview

The Gamer Profile is the centrepiece of the platform. It functions like a LinkedIn profile but is purpose-built for gaming identity. Each profile is public by default and accessible at a unique URL (https://gamers.sg/username).

4.2 Profile Fields

Field	Description
Display Name / Username	Chosen by the user. Must be unique across the platform. Cannot be changed more than once every 90 days.
Legal Name (Read-Only)	Auto-populated from SingPass Myinfo. Not publicly displayed unless user opts in.
Profile Photo	Uploaded by the user. Platform enforces a moderation check (no offensive imagery).
Cover / Banner Image	Optional secondary image for the profile page header.
Bio	Free-text field, up to 300 characters. User-authored description of gaming identity.
Games Played	A searchable, tag-based list of games the user plays. Drawn from a platform-managed game library with free-text fallback.
Primary Game Role	Optional field. E.g., IGL, Support, ADC, AWPer. Per-game tagging is preferred.
Current Team(s)	Auto-populated from the Teams module. Displays active team memberships.
Past Teams	Auto-populated historical record of teams the user has been part of.
Achievements	Admin-assigned and organiser-assigned verified records. Cannot be self-claimed.
Tournament / Event History	Auto-populated from participation records in the Tournaments and Events modules.
Profile Visibility	Toggle between Public (default), Members Only, or Private.

4.3 Profile URL

Each gamer profile is accessible at https://gamers.sg/@username or https://gamers.sg/u/username. Profiles are crawlable by search engines to build organic reach and allow users to share their profiles externally.

4.4 Profile Completeness Indicator

A visual progress indicator (similar to LinkedIn's profile strength) should encourage users to fill in all sections. A complete profile unlocks a bonus points award (see Points System, Section 8.2).

5. Achievements and Competitive Record System

5.1 Philosophy

Achievements are the primary unit of value on a gamer's profile. They represent verified, real-world participation in tournaments, events, and activities. They function like a professional certification or work history entry on LinkedIn. Because they are admin- or organiser-assigned (never self-claimed), they carry inherent credibility.

5.2 Achievement Data Model

Field	Description
Title	Short display title. E.g., Top 8 - Campus Legends Valorant Season 8.
Description	Longer contextual description of the achievement.
Category	Enum: Tournament Placement, Event Participation, Community Contribution, Platform Activity, Special Award.
Associated Event / Tournament	Link to the event or tournament record on the platform (if applicable).
Game	The game associated with this achievement (if applicable).
Date Awarded	Date the achievement was granted.
Awarded By	The organiser or admin entity that issued the achievement.
Points Value	The number of Gamers Points awarded when this achievement is collected. Set by admin.
Badge Image	Optional icon/badge graphic uploaded by admin or organiser.
Visibility	Public or Members Only.

5.3 Achievement Assignment Workflow

- Admin or approved Organiser creates an achievement template.
- Achievement is linked to a specific event or tournament (or marked as a standalone award).
- Admin or Organiser uploads a CSV of usernames or platform IDs to bulk-assign, or assigns individually via the management interface.
- User receives an in-platform notification and the achievement appears on their profile.
- Points are automatically credited to the user's account upon achievement assignment.

6. Teams Module

6.1 Overview

The Teams module enables competitive team formation and tracks both current and historical team memberships. This feeds directly into a gamer's profile, providing a verifiable record of who they have played with.

6.2 Team Profile Fields

Field	Description
Team Name	Unique display name.
Team Tag / Abbreviation	Short tag (e.g., CLG, TSM-style). Used in tournament rosters.
Team Logo	Uploaded image.
Primary Game(s)	The game(s) the team competes in.
Team Bio / Description	Free-text description.
Current Roster	Active members with their in-game roles.
Team Captain	Designated member with admin rights over the team profile.
Past Members	Historical roster record.
Achievements	Tournament placements and event participations attributed to the team.
Team Visibility	Public or Members Only.

6.3 Team Management

- Any verified Gamer member can create a team.
- The creator automatically becomes Team Captain.
- Team Captain can invite members via in-platform invite (search by username) or via a shareable invite link.
- Team Captain can assign or remove the Captain role.
- Team Captain can remove members.
- Members can leave a team at any time. Their historical record of being in the team is preserved.
- Team Captain can disband the team. The team record is preserved as a historical entry on all past members' profiles.

7. Tournaments and Events Module

7.1 Distinction Between Tournaments and Events

The platform distinguishes between two activity types:

Type	Description
Tournament	A structured competitive activity with defined brackets, game titles, ruleset, and placement outcomes. Produces achievement records and potentially points for participants.
Event	A broader category covering any other type of organised activity. This includes physical events (e.g., Campus Legends launch, expos), digital events (e.g., game beta/alpha access registration, developer activations), and community activities (e.g., surveys, watch parties).

7.2 Organiser Listing Portal

Approved Organisers can access a dedicated management portal to list and manage their activities. SCOGA acts as the platform operator and reserves the right to approve, reject, or remove any listing.

Tournament Listing Fields

- Tournament name and description
- Featured game title
- Format (e.g., single elimination, double elimination, round robin, Swiss)
- Platform / client (e.g., PC, console, mobile, specified game server)
- Registration open and close dates
- Tournament start and end dates
- Physical or online (with venue details if physical)
- Team or individual registration
- Maximum participant/team count
- Prize pool or prize description (if any)
- Registration fee (if any, processed through platform payment system)
- Ruleset document (uploadable PDF)
- Achievements to be awarded (linked to achievement templates created in advance)
- Points to be awarded per placement tier
- Organiser contact details

Event Listing Fields

- Event name and description
- Event type (Physical / Digital / Hybrid)
- For digital events: access type (e.g., beta key distribution, link delivery, form collection)
- Capacity or slots available
- Registration open and close dates
- Event date(s)
- Venue (if physical)
- Age or eligibility restrictions (if any)
- Registration fee (if any)
- Points awarded for participation
- Associated achievement (if any)

7.3 User Registration Flow

- Gamer browses the Tournaments or Events directory.
- Gamer clicks Register. If registration requires a paid fee, they are routed to the payment module.
- Upon successful registration, a confirmation appears on their dashboard and an email notification is sent.
- For team tournaments, the Team Captain registers the team and selects roster members from their team.
- Registered participation is tracked on the user's profile under Tournament / Event History.

7.4 Achievement Auto-Assignment on Completion

After a tournament or event concludes, the Organiser can trigger bulk achievement assignment through the portal. The platform matches participant records and awards achievements and points automatically.

8. Membership and Points System

8.1 Membership Tiers

All Gamer accounts begin as free (unsubscribed) accounts with limited access. Full platform access is unlocked through an annual paid membership.

Tier	Access
Free Account	SingPass verified profile. Can view public profiles and event listings. Cannot participate in member-only events, access the member store, or earn points. Cannot appear in the organiser-facing talent directory.
Member (Paid)	Full access to all platform features. Earns points. Access to the member store. Eligible for member-only events, perks, and discounts. Appears in talent directory. Eligible for job applications.

Membership pricing and any tier differentiation (e.g., a higher premium tier) are admin-configurable and can be updated without a code deployment.

8.2 Gamers Points System

Gamers Points are the platform's internal rewards currency. They are designed to incentivise platform usage, event participation, and membership retention. Points are earned by completing activities and can be redeemed as monetary offsets in the member store (1 point = SGD $1.00).

Points Earning Triggers

Activity	Points Mechanism
New member registration	Award on first paid membership sign-up.
Complete profile (100%)	One-time award for reaching full profile completeness.
Tournament participation	Awarded upon confirmed participation. Higher awards for placements.
Event attendance	Awarded upon check-in confirmation (physical) or access redemption (digital).
Completing a platform survey	Admin-configurable points per survey.
Annual membership renewal	Loyalty bonus awarded each year the user renews.

Referring a new member	Referral bonus when a referred user completes paid registration.
Achievement unlocked	Each achievement carries a points value set by admin.

Points Rules

- Points are non-transferable between accounts.
- Points have no cash redemption value and cannot be sold or traded.
- Points expire 24 months after they are earned if unused (admin-configurable).
- Points balances are visible on the user dashboard at all times.
- All points transactions (earned and spent) are logged and auditable by admin.

9. Jobs Board Module

9.1 Overview

The Jobs Board is modelled on LinkedIn's jobs functionality but scoped to gaming-industry and esports-related opportunities in Singapore. It connects employers and organisations seeking gaming talent with the verified gamer community on the platform.

9.2 Listing Types

- Full-time employment
- Part-time employment
- Internship / attachment
- Freelance / contract
- Volunteer (e.g., event crew, community managers)

9.3 Job Listing Fields

Field	Description
Job Title	Display title of the role.
Organisation Name	The hiring entity.
Job Type	Enum from the listing types above.
Location	Physical address, remote, or hybrid.
Description	Full job description. Rich text supported.
Requirements	Skills, qualifications, or experience required.
Compensation	Salary range or stipend (optional but encouraged).
Application Deadline	Closing date for applications.
Application Method	Apply via platform (CV upload) or redirect to external URL.
Tags	Games, skills, or roles relevant to the listing (e.g., Valorant, Broadcasting, Community Management).

9.4 Application Flow

- Gamer member views listing and clicks Apply.

- If applying via platform: user submits a cover note and optionally attaches a document (PDF resume).
- Their Gamers.SG profile link is automatically included in the application submission.
- Employer receives application notification and can view the applicant's full public profile.
- Employer manages applications through their organiser/employer portal.

9.5 Listing Moderation

All job listings must be approved by SCOGA admin before going live. This protects the community from scam listings. SCOGA may charge a listing fee for commercial employers.

10. Member Store (E-Commerce Module)

10.1 Overview

The Member Store is a members-only e-commerce section offering products and vouchers at special rates unavailable to the general public. It serves as both a membership perk and a commercial channel for brand and retail partnerships.

10.2 Product Categories

- Gaming hardware (peripherals, accessories)
- Game vouchers and in-game currency top-ups
- Full game purchases (digital codes)
- SCOGA / Campus Game Fest merchandise
- Event tickets (where paid entry is required)
- Partner vouchers and discount codes

10.3 Product Listing Fields

Field	Description
Product Name	Display name.
Category	From the categories listed above.
Description	Product details.
Images	Up to 5 product images.
Regular Price (SGD)	The standard retail price for reference.
Member Price (SGD)	The exclusive member-discounted price.
Points Offset Eligible	Boolean. If true, user can use Gamers Points to offset up to 100% of the member price.
Stock Quantity	For physical goods. Platform will prevent purchases beyond available stock.
Fulfilment Type	Physical delivery, digital code delivery, in-person collection, or event redemption.
Partner / Supplier	The brand or partner providing the product.
Active / Inactive	Admin toggle to show or hide from the store.

10.4 Checkout and Payment Flow

- User browses store and adds items to cart.
- At checkout, user sees the member price breakdown.
- If the item is Points Offset Eligible, user can choose to apply available points (1 point = $1.00 offset). Minimum cash payment may apply for partner stock items.
- Remaining balance is paid via payment gateway.
- Order confirmation is sent via email and appears in the user's order history.
- For digital products (codes, vouchers), the code is delivered automatically via email and visible in the user's account.

10.5 Order Management

- Users can view full order history in their account dashboard.
- Admin has a full order management view with fulfilment status tracking.
- Physical orders require admin to update fulfilment/shipping status.

11. Administration Portal

11.1 Overview

The Administration Portal is a secure, web-based back-office interface accessible only to SCOGA staff. It provides full oversight and management of all platform modules.

11.2 Admin Capabilities

- User management: view, search, flag, suspend, or delete gamer accounts.
- Organiser management: approve, reject, suspend organiser accounts.
- Achievement management: create, edit, delete achievement templates and bulk-assign to users.
- Tournament and event moderation: approve, reject, or remove listings.
- Jobs board moderation: approve, reject, or remove job listings.
- Store management: create, edit, and deactivate product listings.
- Points administration: manually award or deduct points from user accounts with audit logging.
- Membership management: view active and lapsed memberships, process manual overrides.
- Content management: manage static pages, FAQs, platform announcements.
- Reporting: export user data, transaction logs, membership figures, and event registrations as CSV.

12. Notifications and Communications

12.1 Notification Channels

- In-platform notification centre (bell icon, unread count badge).
- Email notifications (transactional and marketing, with user opt-out controls for marketing).

12.2 Notification Triggers

Trigger	Channel
New achievement awarded	In-platform + email
Team invitation received	In-platform + email
Tournament registration confirmed	In-platform + email
Event registration confirmed	In-platform + email
Job application submitted	In-platform
Points credited to account	In-platform
Order placed and confirmed	Email
Digital product / code delivered	Email
Membership renewal reminder (30 days, 7 days, 1 day)	Email
Membership expired	In-platform + email
Platform announcement	In-platform

13. Non-Functional Requirements

13.1 Performance

- Page load time under 3 seconds for all core pages on a standard broadband connection.
- Platform should handle a minimum of 10,000 concurrent users without degradation.
- API response times under 500ms for 95th percentile of requests.

13.2 Security

- Full HTTPS enforcement across all endpoints.
- PDPA compliance for all personal data collected and stored.
- NRIC and sensitive identity data stored only as one-way hashes.
- Payment card data must never touch the platform server. All payment processing via PCI-DSS compliant third-party gateway.
- Regular security audits and penetration testing recommended pre-launch and annually.

13.3 Scalability

- Architecture should support horizontal scaling to accommodate traffic spikes (e.g., during major tournament registration windows).
- Database design must account for growth to 100,000+ user accounts within three years.

13.4 Accessibility and Device Support

- Platform must be fully responsive and functional on mobile browsers (iOS Safari, Android Chrome) in addition to desktop.
- No native mobile app is required for V1.0, but the responsive web design must deliver a high-quality mobile experience.
- Minimum browser support: latest two major versions of Chrome, Firefox, Safari, and Edge.

13.5 Availability

- Target uptime of 99.5% or better, excluding scheduled maintenance.
- Scheduled maintenance windows communicated to users with at least 48 hours notice.

14. Technical Integration Notes

14.1 SingPass / Myinfo API

Integration with NDI SingPass is a hard dependency for the platform. The development team must initiate the Relying Party application process with GovTech early in the project. Approval timelines can range from 4 to 8 weeks. This should be factored into the project plan.

Relevant resources:

- SingPass API Developer Portal: https://api.singpass.gov.sg
- Myinfo Developer Guide: https://docs.developer.tech.gov.sg/docs/myinfo-gov/

14.2 Payment Gateway

The platform requires integration with a Singapore-supported payment gateway capable of processing card payments and ideally PayNow (QR-based instant payment). Recommended options include Stripe (SGD supported, strong developer API), HitPay (Singapore-built, PayNow-native), or Braintree.

14.3 Email Service

Transactional email (order confirmations, achievement notifications, registration confirmations) requires a dedicated email delivery service. Recommended: SendGrid, Postmark, or AWS SES. All email sending should use a verified sending domain under the gamers.sg domain.

14.4 File and Media Storage

User-uploaded assets (profile photos, team logos, product images, ruleset PDFs) must be stored on a cloud object storage service (e.g., AWS S3, Google Cloud Storage, Cloudflare R2) with CDN delivery for performance.

14.5 Recommended Stack (Non-Prescriptive)

The platform owner does not mandate a specific technology stack but recommends the following considerations:

- A modern JavaScript or TypeScript full-stack framework (e.g., Next.js, NestJS) to enable code sharing and a strong developer community.
- A relational database (e.g., PostgreSQL) is preferred over NoSQL for this use case given the relational nature of users, teams, events, and achievements.

- A well-documented REST or GraphQL API layer so that a future mobile app can be built against the same backend.

15. Out of Scope for V1.0

The following features are acknowledged as desirable but are explicitly deferred to a future version:

- Native iOS or Android mobile application.
- In-platform messaging or direct chat between users.
- Social feed or content publishing (posts, updates).
- Live tournament bracket management or online scoring system.
- Matchmaking or team-finding algorithm.
- Integrated live streaming or VOD hosting.
- In-depth analytics dashboard for organisers.
- Multi-language support (platform launches in English only).
- Affiliate or referral tracking beyond basic referral points.

16. Open Questions and Decisions Required

The following items require decisions from the platform owner before or during the development scoping phase:

Item	Question
Membership pricing	What is the annual membership fee? Will there be a monthly option? Any early-bird pricing?
Organiser listing fees	Will organisers pay to list tournaments and events? If so, what is the pricing model?
Employer / jobs listing fees	Same question for the jobs board.
Points expiry policy	Confirm the 24-month expiry period or define an alternative.
Points cap	Is there a maximum points balance a user can hold?
Minimum cash payment in store	Can a user offset 100% of a purchase with points, or is a minimum cash component required?
Physical goods fulfilment	Does SCOGA manage physical goods logistics in-house, or is this entirely partner-fulfilled?
SingPass RP application	Has the Relying Party application with GovTech been initiated?
Beta / digital access event mechanics	For digital events (e.g., game beta key distribution), how are access codes delivered? Through the platform or externally?
Content moderation	What is the process for reporting and moderating inappropriate profile content or listings?

Appendix: Module Summary

Module	Description	Version
Authentication	SingPass / Myinfo integration. Session management. Role-based access control.	V1.0
Gamer Profile	Verified public profile. Games played. Bio, photo, teams, achievement display.	V1.0
Achievements System	Admin/organiser-assigned. Linked to events and tournaments. Points integration.	V1.0
Teams	Team creation, roster management, invite system, historical records.	V1.0
Tournaments	Organiser-listed. Registration (individual and team). Bracket info. Achievement/points integration.	V1.0
Events	Physical and digital events. Registration. Beta/access key distribution. Points integration.	V1.0
Jobs Board	Gamer-focused listings. Application via platform. Profile-linked applications.	V1.0
Member Store	Members-only pricing. Points offset. Digital and physical goods. Order management.	V1.0
Points System	Earning triggers. Redemption in store. Audit log. Expiry management.	V1.0
Membership / Payments	Annual subscription. Payment gateway integration. Renewal reminders.	V1.0
Admin Portal	Full back-office management across all modules.	V1.0
Notifications	In-platform + email. Transactional and marketing (opt-out).	V1.0
Native Mobile App	iOS and Android app.	Future
In-App Messaging	Direct messages between users.	Future

Social Feed	User-generated posts and updates.	Future
Live Bracket Tool	Real-time tournament bracket management.	Future

End of Document
